

DAVID SOLODUKHIN

U.S. CITIZEN | 914-564-8872 | DAVID.SOLODUKHIN@GATECH.EDU

EDUCATION

Georgia Institute of Technology - Atlanta, GA
Candidate for B.S. in Computer Science

Graduating Dec 2019

GPA: 3.96/4.0

Courses: Information Security Lab, Distributed Systems, Advanced O.S. Development, Database Systems Design, Networking

Orgs: Grey Hat Security CTF team: web exploit engineer, Collegiate Cyber Defense Competition Team, Linux Users Group; Phi Kappa Theta (ΓΤ) Fraternity– I.T. Chair

EXPERIENCE

Prudential Financial – Newark, NJ

May 2018 – August 2018

Software Engineer Intern, Enterprise Services & Systems

- ♦ Modernized in-house Metadata Management System (TMS) web application, enabling lower query latency, a wider array of query protocols as well as reorganization into microservices.
 - Added frontend features using ReactJS (previously JSP) and rewrote Struts2 MVC functionality in Spring MVC(Web).
 - Using the Spring Framework, the application is now able to integrate with other middleware tools and provides microservices for metadata management. (Spring Web/Boot, JSP, Struts2, Maven, Gradle, Java 8, Javascript, Reactjs, ES6).
- ♦ Reduced daily build time of MMS system by several hours with multi-module Maven build scripts that automate building of Oracle ADF applications.

Institute for Information Security and Privacy - Georgia Tech

October 2017 – October 2018

Undergraduate Research Assistant – Dr. Taesoo Kim

- ♦ Designed and evaluated new anti-fuzzing techniques to slow down modern fuzzers and protect software (ELF binaries) from malicious fuzzing.
- ♦ Wrote LLVM passes in C++ to implement anti-fuzzing techniques in existing Linux executables.
- ♦ Automated executable instrumentation, unit testing of anti-fuzzing methods as well as analysis and plotting of fuzzing statistics with **Python**.
- ♦ Revised and edited final paper which was submitted to USENIX and Black Hat (pending).

College of Computing - Georgia Tech

January 2018 – Present

Undergraduate Teaching Assistant – Design and Analysis of Operating Systems

- Responsibilities consist of hosting office hours to help students understand key operating systems concepts, systems programming in C as well as grading.

PROJECTS & CVES– [GITHUB.COM/DAVID-SOLODUKHIN](https://github.com/DAVID-SOLODUKHIN)

- ♦ **Linux Kernel Modules** (kernel v4.15.18): Developed a module which starts a UDP server process within the kernel for transmitting O.S. filesystem, process stats. Implemented a kernel module for network traffic artificial throttling and packet proxy. Modules were written in C.
- ♦ **Linux Kernel Hypervisor(KVM) Scheduler:** KVM management app that load balances up to 24 virtual machines on a multi core processor based on virtual CPU & memory load, leading to ~%5 more throughput compared to native KVM (C,C++)
- ♦ **(K)ASLR and PIE for xv6:** Implemented user-space ASLR and simple kernel ASLR for the xv6 operating system. Also added custom PIE support for xv6 binaries.
- ♦ **Map-Reduce GRPC Implementation:** Map-Reduce architecture using GRPC for rpc communication between cluster workers and master. Architecture includes separate worker and master applications written in C++ for Linux.
- ♦ **Wolfram Alpha Bug:** Found SSRF vulnerability in Wolfram Alpha's api giving access to premium features for free. Contacted WA team and exploit was patched.

SKILLS

Languages: Java, C++, C, Javascript, Python, (PL)SQL, Perl, PHP, x86/64 ISA (GAS, FASM)

Testing: Selenium, TeamCity, TestComplete, Junit

Technologies & Tools: Reactjs, Maven, Gradle, Node.js, JQuery, Android SDK, LLVM(Clang), Git, Mercurial, JSP, Oracle Weblogic, Struts2, Spring Web, Dart, Flutter, KVM/QEMU, libvirt, Bash, Burp, IDA, Wireshark, Kali tools, Metasploit, PowerShell, Docker, DHT, Map-Reduce, Database Systems, OpenMP, MPI

Security: Reverse Engineering, Digital Forensics, Pentesting, ROP, Linux Kernel-security, privilege escalation, fuzzing, WebLogic, Wildfly, AWS, Active Directory

Foreign Language: Russian; Native Fluency
